## 1. Introduction

Open Source Requirements Management Tool (OSRMT) is a highly configurable free open source solution for defining and managing Requirements for software development. This is an easy to install and easy to use solution with capabilities to document all aspects of software development life cycle (SDLC).

This solution was initially built in 2006. However no further development happened for many years. In 2019, the redevelopment was initiated by Alan Clifford and a new version (Version 1.6) was released in Feb 2019 at GitHub. This can be accessed through <https://github.com/osrmt/osrmt>

### **Purpose of this Document:**

The purpose of this document is to provide a road map to OSRMT redevelopment and enhancements for the short and long term.

## **2. Product Enhancement Plan**

### **Goals:**

#### **Initial Goals**

1. Create a requirements management tool available with source at no cost and without any need to register
2. Provide acceptable functionality and documentation including clear, complete installation instructions
3. Create a community to support and enhance the tool

#### **Long term Goals**

Create a free and open source solution that will cater to the following

1. Provide a viable free, open source alternative to most commercial Requirements Management solution
2. Offer browser based access without any local implementation
3. Provide regular releases with enhancements and bug fixes
4. Run on all popular operating systems
5. Be available with multiple languages
6. Work on all popular databases
7. Work with other tools
8. Have a world-wide, active community supporting one another and enhancing our tool
